Influencing Toolkit 2023

Part Two

Contents

Part one

1. Introduction
2. Policy Context
3. Messaging
4. Who to Influence
5. How to Influence

Part two

6. Messaging Tips
7. Resources
8. Further Help

Messaging

In order to be an effective influencer, you need to:
Understand your audience's needs, wants and concerns
Match that mindset with the objectives of your ICS or locality
Be clear about what you want them to do and why it is in their interests to do so. These 'asks' could be ensuring there is adequate investment in physiotherapy services, or that physiotherapy is included in the design of new models of care and/or the overall governance of the benefits of physiotherapy within the MDT.

Before you contact the person you are influencing you may not have a good understanding of what physiotherapists do or the pressures they are under, so it is important to go back to basics and establish some key messages based around the following questions:

- **What do physiotherapists do? What contribution do they make?**
- **Where do physiotherapists work?**
- **What is the current workforce and staff under?**
- **Where does physiotherapy sit within the structure of the NHS? How do physiotherapy services relieve pressure on other parts of the NHS? What is the evidence?**
- **How do physiotherapists work with other professionals?**
- **What are some of the key benefits of physiotherapy?**

No cuts to physiotherapy services
What are you key messages?
Why should they listen to you? Know one else, what do you ideally want to see/ invested in to do the job well?
Do you have specific examples you can share?
Be clear about what you want them to do at the beginning of the meeting and don't be afraid to ask for what you want.
What would success look like?
Ask them what they will do next before and after and if you can be sure that a meeting or something else will take place in the foreseeable future.
Could you make the meeting interactive/ participative?
What materials can you leave behind? Can you share an ICP campaign briefing?
After a meeting, reflect on what went well and what you could do differently for the next time.

All Health Boards and ICS will have priorities and a strategic plan, but one area that is likely to be common to all is the need to reduce pressure on hospitals. Your key messages should therefore be around how physiotherapy can help to achieve this. Physiotherapists can help to reduce demand on hospitals by working in the community to look ahead, which are usually available online. Here is an example of how this might look in practice:

ICS/ HEALTH BOARD/TRUST OBJECTIVES
Reduce pressure on hospitals and improve patient outcomes

PHYSIOTHERAPY KEY MESSAGES

1. Physiotherapy helps to encourage prevention and facilitate recovery, enabling people to stay in work while helping them maintain independence in their own homes

2. Patient experiences in the community setting are positive and physiotherapists are the central point of contact for many people with long term conditions

3. Unacceptable waiting times for physiotherapy services can have a negative impact on patient outcomes. We must change the way we work to ensure that we are meeting the needs of our patients

A messaging house is a visual and simple way to develop a strong and consistent message. It is a tool that can be used to help you to develop your key messages. Starting with the roof, which is the overall message you want to get across, followed by the pillars which support the roof, and finally the foundations which underpin the pillars. Each of these sections should be filled with evidence to support your messages.

These messages ensure that in any meeting or approach, you have the tools to hand to demonstrate the benefits that physiotherapy can bring.

Here is an example of a messaging house for tackling health inequalities, the messages house could look like:

HEALTH INEQUALITIES MESSAGES

Improving poor rehabilitation provision will reduce health inequity across the system

CORE MESSAGE

Those might be flexible depending on the stakeholder you are engaging with, for example:

Physiotherapy services can reduce health inequalities

It is often those with the greatest characteristics who face the biggest challenges in accessing physiotherapy services. Here are some examples of how we can help:

Tackle demands on the Health and Social care systems

Physiotherapists can help to reduce pressure on hospitals and primary care by intervening within primary care and community settings to support people to remain independent in their own homes.

Physical activity and health for all

Physiotherapists can help to overcome existing patterns to participate in physical activity, even just through simple changes to the way we move throughout our day.

Empower people to help themselves

You may already have existing evidence to use, such as patient success stories, or you may want to collect some as part of your work. Here are some examples of how physiotherapy can help to improve the benefits of investing in rehab services:

You may want to consider using surveys to collect information from patients, or you may want to work with the wider health system leads, for example, there may be opportunities to collect patient stories as part of the wider ICS communications work.

You may also want to ask other services or partners what they think physiotherapy can do to help them achieve their objectives. This can help to identify any gaps that need to be closed or where efficiencies can be made, helping to demonstrate what could be achieved this way.

Case studies

Karen Pesch
Clinical Improvement (Rehabilitation)
North East London Health and Care Partnership

For Karen, influencing has been about finding a common language that physiotherapists can use to talk to other professionals about their role.

Karen is clinically focused and has been involved in the development of Alliances and meeting in developing these relationships. Bringing together the skills, knowledge and experience of the whole system to improve outcomes for patients is core through different models of care and pathways in Alliances.

Karen developed a 'dashboard' with colleagues - in producing the easy-to-read dashboard, they had to consider what was important to the system and how to present this in a way that everyone could understand it (awareness of the audience), which benefitted workforce retention and led to a new ACP role for the system.

Karen has also been involved in the development of the Level 2 and Level 3 offer of rehabilitation which will include community rehabilitation (physiotherapy) and will be a key part of the development of the ongoing MSK pathway as all of the elements to make it successful are in place.

Ishaq Jamaan
Community Physiotherapist Lead
Bradford Teaching Hospitals NHS Trust

Ishaq's role includes leading and developing physiotherapy workforce for the creation of the first intermediate care MDT in Connectthehomes. They felt that they had the knowledge and skills to lead the service, but that they needed to learn how to influence and gain support. The initial service, from April to September 2022, was a success.

Ishaq initially emailed senior decision makers within the local authority and Integrated Care Board, including Head of Integrated Services and Head of Commissioning, to introduce himself and the service. He also met with Health Board, highlighting the problems with discharges, and outlining how physiotherapy could help.

As a result she was invited to an existing meeting to present her proposal and ask for support and investment. Ishaq also met with the Commissioning Manager to discuss the proposal and how to secure funding. Ishaq also met with the Head of Service to discuss the proposal and how to secure funding.

They feel that their success has really advocated for the value of physio and how physio can help to reduce pressure on hospitals and improve patient outcomes. Ishaq has also been invited to present at other meetings.

Ishaq and her colleague's influencing, development and implementation of their service has led to Ishaq receiving a Contribution to Transforming Health and Care Award at the NHS Wales.

Watch the video above for advice for CSP learners on influencing from Susan C-S CEO Adam Doyle

Resources

The first thing to consider in your strategy is who the decision-makers and influencers are in your ICS or locality. Your ICS will have a website which will provide information about the governance structure, and the membership and terms of reference of committees, boards, and other groups. Your locality will also have a website which will provide information about the governance structure, and the membership and terms of reference of committees, boards, and other groups. **It is never people that you follow on Twitter.**

Who are the decision makers?

Once you have identified who you want to contact, start by getting in touch with their office or place of work. Explain where you work and your role and ask if you can arrange a meeting with them. Be clear about what you want to discuss with them and why it is in their interests to meet with you (see section below for this). If you do not receive a response within a couple of weeks, then chase it up.

Template Letter/Email

[Date TBAM]

[Name of person who is SENIOR HEALTHCARE position in charge of the area which you are influencing, for example, Director of Adult Social Care, Director of Public Health, Chief Executive]

As a Part-Time Mayor, you presumably have brought to the position many important priorities for the [name of area] and I am writing to you because I believe that physiotherapy services can help you to achieve many important parts of the NHS, and [name of area] Plan.

[Name of area] has a growing population of [number] people, with [number] people aged over 65. This is a fantastic and rewarding demographic to work with, but it also presents challenges for the NHS and Social Care. Many of these challenges are around how we support people to remain independent in their own homes for as long as possible, and how we support people to remain physically active. Physiotherapists can help with both of these challenges. Physiotherapists are experts in movement and can help people to overcome barriers to physical activity, and to remain independent in their own homes for as long as possible. Physiotherapists can also help to reduce demand on hospitals and primary care by intervening within primary care and community settings to support people to remain independent in their own homes.

I would be delighted to meet with you to discuss how physiotherapy services can help to achieve your priorities for the [name of area]. Please let me know if you would like to meet with me and I will be happy to arrange a meeting at a time and place that is convenient for you.

I look forward to hearing from you.

Yours sincerely,

[Your name]

AT THE MEETING

Whether you have arranged a phone call, an online meeting or a meeting where a decision-maker will be visiting your office, you will need to prioritise a few of your concerns across. This section of the toolkit provides some tips for meetings.

Before you start

- Preparing an agenda ahead of time can help to ensure that you get the most out of your meeting. Make sure you are clear on what you want to discuss and why it is in their interests to do so. Be clear about what facilities you are going to show them. If you are using a PowerPoint presentation, make sure that you have a copy of it on a memory stick in case the computer you are using does not have a suitable piece of software. A hard copy agenda for a meeting or a presentation is also helpful.
- Consideration to your work uniform.
- The care for your objective (e.g. securing more staff and targeting your key messages).
- Be clear, prompt and professional when you arrive.
- How they can help.
- Be clear about any questions or provide any further information.

It is also important to ensure that the meeting participants are aware of who they are there to be (we remember that you are the expert, and you should be clear about your role in the meeting).

During the meeting

The majority of questions will undoubtedly be around you, but it is worth preparing for questions that you may be asked. Here are some examples of questions that you may be asked:

- How you met but physiotherapy? What are your experiences?
- You want to see more physiotherapists, where are we going to find them?
- How do you think physiotherapy services can best serve patients and our system?
- Why do you think we need to be last utilised, both for the service and for patients?

Following the meeting

- Immediately after the meeting write or email to thank them for coming, summarising what was discussed and any actions that were agreed.
- Ensure that you follow up on any actions that you have agreed to do. If you have not already, invite them for a service visit or to sit in on the learning set. Ensure that you have their contact details and that you have agreed on the next.

Tell the CSP about your engagement by contacting the CSP team about your meeting and what was discussed. Please email [insert email] and we will be able to provide support and advice on the next steps.

USING SOCIAL MEDIA

Think of social media as an opportunity to build your virtual network and a way of engaging with stakeholders who you may not get the chance to interact with in person. Social media can be a powerful communication tool for influencing decision-makers, commissioners, planners and leaders. Social media is a great way to share your messages with a wide audience and news related to physiotherapy. The CSP has helpful [social media guidance](#) which can be found on their website.

Twitter

Twitter is a great tool for tweeting key messages to promote physiotherapy or with a link to any relevant public consultations or campaigns you are supporting.

We have shared some examples below of how you could adapt the tools to mention any relevant profiles such as ICS or Health Board/Trust accounts, Chief Executives, Chief Nursing Officers, Directors of Public Health, Directors of Adult Social Care, your local newspapers, a local health charity or your local MP. Remember to use the CSP's campaign hashtag #APhysioToday to each and every post and campaign that includes social media.

Use hashtags such as **#PublicHealth** and **#StaffSupport** to help you to find relevant conversations and to ensure that you are using the right hashtags for the latest tweets on physiotherapy campaigns and the wider health system. Use the search function to find out what is being said about your area and to find out who is talking about the issues that you are concerned about. Use Twitter lists to find out who are promoting the work of physiotherapy.

Ensure your profile and tweets are professional and that you are not sharing any personal information or tweeting about anything that could bring your local Health Board/Trust or the wider health system into disrepute. Be careful when you retweet or like posts.

Facebook

Most community and voluntary partners groups, some GP practices and many patients will be on Facebook. Setting up a planning group or other physiotherapist-based Facebook profile page can be useful and you may want to join or 'like' the pages of relevant groups, such as your local Health Board/Trust.

Facebook is a particularly useful tool for promoting events, such as a drop-in session that you may be holding in your locality. You can also use Facebook to share patient stories, for example, a patient who has been helped by physiotherapy to go about it and have the chance to support it. If there's not a page for your locality, consider creating one yourself.

LinkedIn

LinkedIn is an excellent platform to network and connect with professionals in your area and to share news and ideas. It also has information and discussion groups and is a good way to find out about events, training, conferences, jobs and opportunities for career development. If you don't already use LinkedIn, why not set up a profile and connect to the CSP?

Google Alerts

Signing up to google alerts will some key words in a useful way to keep up to date with the latest news, research and policy around a particular topic. Many offer your preferred frequency of updates, so you can choose how often you are kept up to date with the latest information. It can provide inspiration for your influencing strategy and ensure that you are aware of any key news information to help support you as.

Here are some staff members who you can adapt based on your influencing activity. Using photos and videos can help bolster support for your tweet.

Insert name tag twitter, and so share of [name of area] Plan. Physiotherapy services can help to achieve many of these aims and I am keen to arrange a meeting with you to discuss how to [insert name of area] Plan.

Insert name tag twitter, are aware of the [insert name of area] Plan. Physiotherapy services can help to achieve many of these aims and I am keen to arrange a meeting with you to discuss how to [insert name of area] Plan.

Delighted to see [insert name tag twitter] announced as the new Chief Executive of [insert name of area] Health and Care Partnership. I look forward to meeting with you to discuss how physiotherapy services can help to achieve the priorities of the [insert name of area] Plan.

Delighted to see [insert name tag twitter] announced as the new Chief Executive of [insert name of area] Health and Care Partnership. I look forward to meeting with you to discuss how physiotherapy services can help to achieve the priorities of the [insert name of area] Plan.

The CSP has a social media guide for members with more information on how to use Twitter, Facebook and LinkedIn, which can be downloaded from the CSP website.

The Chartered Society of Physiotherapy is the professional, trade union and learned body for physiotherapists, physiotherapy support workers, physiotherapy students and support workers.
